

## Purpose of Simultaneous Reform in All Directions to be Achieved by 2045

1. Total global CO2 emissions will turn negative  
Dissemination of various renewable energy based on wooden artificial islands
2. End the world food crisis by 2045.  
Dissemination of fish farming on artificial wooden islands
3. Abolish the world's nuclear bombs  
Popularization of automatic sniper systems
4. Let everyone live happily until the end  
Dissemination of automated care systems using low-speed automated driving vehicles
5. Make it possible to go anywhere by aerial wire railroad  
Spread of the safest vehicle, aerial wire railway

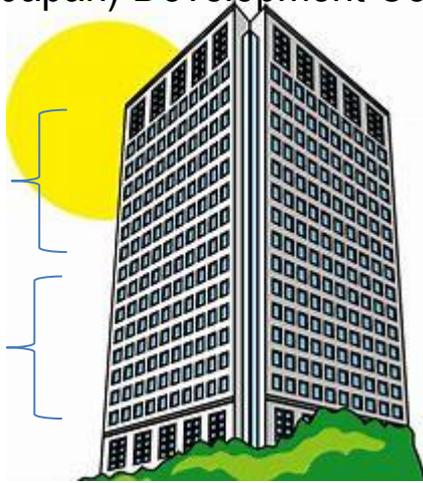

+ Research on rapid expansion of natural and artificial photosynthesis

The EU and Japan will build a peaceful and free world by disseminating various devices domestically (rejecting China's hegemony) and spreading them to developing countries.

## UK & EU (& Japan) Development Center

Research and Development

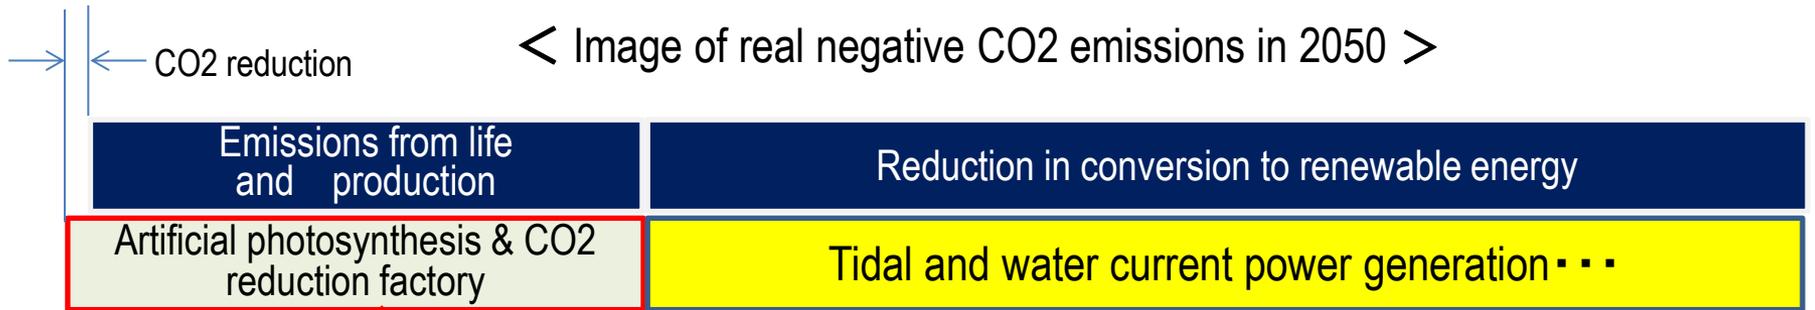

joint experiment

We rented an entire building in downtown Tokyo, and engineers selected through selection tests from each EU country gathered to work on simultaneous reforms in all directions with the spirit of having fun and learning well.

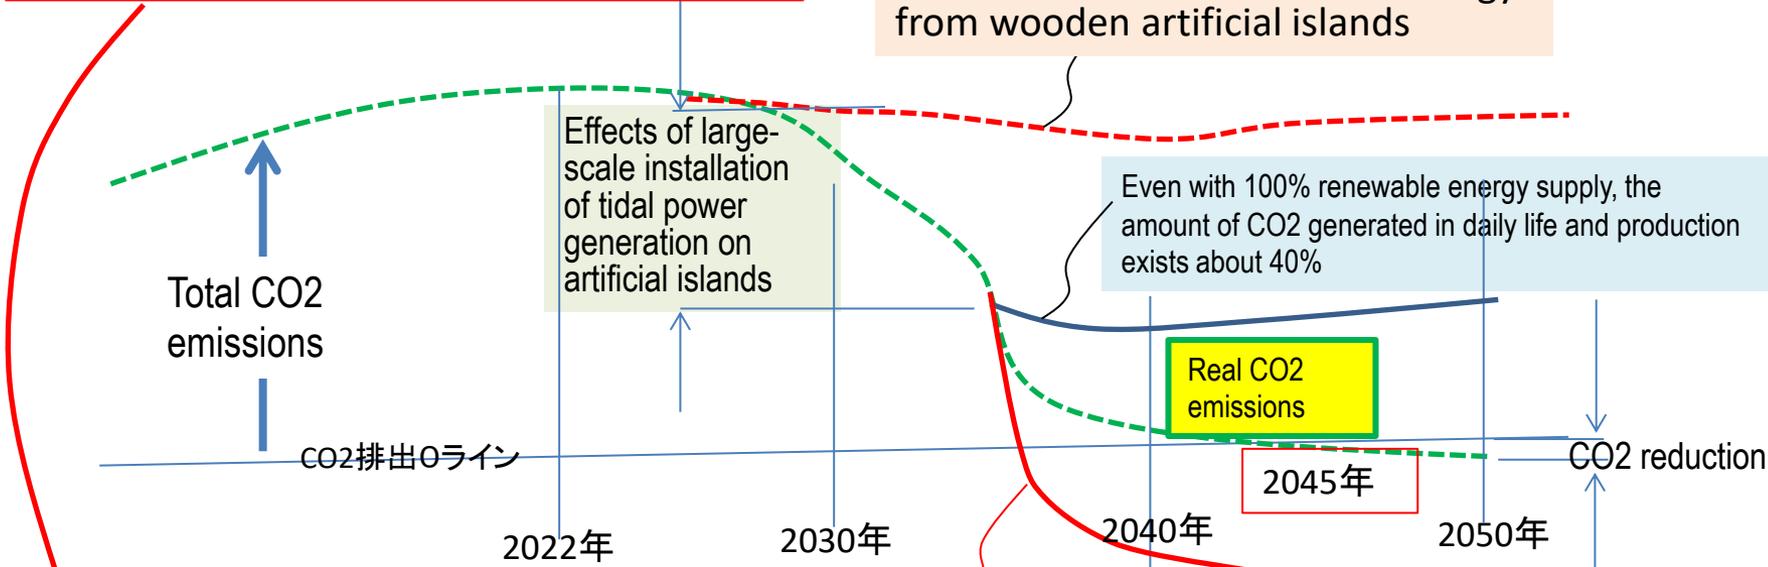

# < Image of real negative CO2 emissions in 2050 >

In principle, it is achievable, so it is necessary to accelerate research around the world for practical application, and the EU can become a leader.

Current route =  
When there is no renewable energy from wooden artificial islands

Strongly promoting research and development of artificial photosynthesis and CO2 reduction factories, To achieve this image CO2 reduction.
